SoftwareOne Named as an Official Launch Partner for New AWS Digital Sovereignty Competency

New AWS certification recognises SoftwareOne's expertise in supporting clients' digital sovereignty and cloud migration requirements

Las Vegas, NV | 4 December 2024 – [SoftwareOne Holding AG](#), a leading global software and cloud solutions provider, today announced that it has achieved Amazon Web Services (AWS) Digital Sovereignty Competency status and has been named an official launch partner for this new global certification. This specialisation recognises SoftwareOne as an AWS Partner, helping clients move sensitive workloads to the cloud safely, while addressing digital sovereignty requirements around data residency and security, data access restrictions, resilience and survivability, and self-sufficiency.

Achieving the AWS Digital Sovereignty Competency differentiates SoftwareOne as an AWS Partner that has demonstrated technical proficiency and proven success in enabling digital sovereignty, allowing clients to design and deploy secure and compliant cloud environments to drive innovation and modernisation of applications and workloads. One of the ways in which SoftwareOne supports clients in their journey to digital sovereignty is via its [AWS Landing Zone](#), a comprehensive pre-configured and automated framework that provides a foundation for building a robust, multi-account AWS environment to ensure secure and compliant operations. Organisations are finding digital sovereignty becoming more critical to their success in an era of increased cybersecurity threats, interruptions to business continuity, and the need for local autonomy. SoftwareOne helps clients to optimise cost, performance and resilience of their IT systems, while keeping robust security and compliance at the heart of every engagement.

“Through our local presence in more than 60 countries, we support businesses in their entire cloud journeys onto AWS, from consulting on cloud strategy and workload migration to accelerating data and AI implementations,” said **Oliver Berchtold, President, Software and Cloud at SoftwareOne**. “Digital sovereignty has increasingly become a priority for our customers, particularly those operating in sectors with high data security requirements such as government and public sector, financial services, or healthcare. Through our AWS expertise and knowledge of local and regional data and compliance laws, we support them as they seek control, continuity and compliance when moving to the cloud. We are honoured to be a launch partner and to have been awarded one of the first in the AWS Digital Sovereignty Competency.”

SoftwareOne is an AWS Premier Tier Services partner. Operating in more than 60 countries, SoftwareOne has achieved more than 1,300 AWS certifications and 23 AWS competencies, including Migration and Modernisation, Security Services and DevOps Services, alongside vertical competencies, such as Financial Services, SaaS and nonprofit.
